

Step-by-Step Guide to Designing an 8-Screen Fashion Design Website in Figma

1. Setting Up Your Figma Project

- Open Figma and create a new project.
- Set up a frame with a standard mobile resolution (375x812 px for mobile design).
- Name your project "Adora."
- Define a color palette, typography, and UI elements.

2. Designing the Splash Screen

- Create a new frame for the splash screen.
- Add a stylish background image or a solid brand color.
- Place the brand logo in the center.
- Add a short tagline or brand message.
- Implement a loading animation or progress indicator.

3. Creating the Login Screen

- Design a clean and simple login form with fields for email/username and password.
- Include a "Forgot Password?" link.
- Add a primary "Login" button.

4. Designing the Sign-Up Screen

- Include fields for name, email, password, and confirm password.
- Add a checkbox for agreeing to terms and conditions.
- Provide a "Sign Up" button.
- Optionally, include social media sign-up options.

5. Developing the Home Screen

- Add a stylish header with the brand logo and navigation menu.
- Design a hero section with a featured fashion collection.
- Include categories like "New Arrivals," "Trending," and "Sale."
- Implement call-to-action buttons like "Shop Now."
- Ensure a visually appealing grid layout for products.

6. Creating the Ask Me/Search Screen

- Include a prominent search bar at the top.
- Add a category filter to refine searches.
- Display search results in a grid or list format.
- Implement an auto-suggestion feature for user convenience.

7. Designing the Contact Us Screen

- Include a contact form with fields for name, email, subject, and message.
- Add contact details like phone number and email address.
- Provide a Google Map integration for location.
- Include social media links for better connectivity.

8. Finalizing the UI & Prototype

- Ensure consistency in fonts, colors, and UI elements.
- Link all screens to create an interactive prototype.
- Test the flow and responsiveness of each screen.
- Make adjustments based on feedback and usability testing.

Conclusion

By following these steps, you can create a sleek and user-friendly fashion design website in Figma. Make sure to test your prototype and refine the design based on user feedback for a better experience.
